PLAYING CATCH-UP WITH YOUR 401(K) OR IRA

A recent survey of baby boomers (ages 53 to 69) found that just 24% were confident they would have enough money to last throughout retirement. Forty-five percent had no retirement savings at all, and of those who did have savings, 42% had saved less than \$100,000.1 Your own savings may be on more solid ground, but regardless of your current balance, it's smart to keep it growing. If you're 50 or older, you could benefit by making catch-up contributions to tax-advantaged retirement accounts. You might be surprised by how much your nest egg could grow late in your working career.

CONTRIBUTION LIMITS

The federal contribution limit in 2016 and 2017 for all IRAs combined is \$5,500, plus a \$1,000 catch-up contribution for those 50 and older, for a total of \$6,500. An extra \$1,000 might not seem like much, but it could make a big difference by the time you're ready to retire (see table). The sooner you contribute, the more time the funds will have to pursue potential growth. The deferral limit in 2016 and 2017 for employer-sponsored retirement plans such as 401(k), 403(b), and most 457(b) plans is \$18,000, plus a \$6,000 catch-up contribution for workers 50 and older, for a total of \$24,000. However, some employer-sponsored plans may have maximums that are lower than the federal contribution limit. Unlike the case with IRAs, contributions to employer-sponsored plans must be made by the end of the calendar year, so be sure to adjust your contributions early enough in the year to take full advantage of the catch-up opportunity. The following table shows the amount that a 50-year-old might accrue by age 65 or 70, based on making maximum annual contributions (at current rates) to an IRA or a 401(k) plan:

| Potential Savings a 50-Year-Old Could Accumulate | | Without Catch-Up | With Catch-Up |
|--|-----------|---------------------|------------------|
| IRA | By Age 65 | \$128,018 | \$151,294 |
| | By Age 70 | \$202,321 | \$239,106 |
| 401(k) | By Age 65 | \$418,697 | \$558,623 |
| | By Age 70 | \$662,141 | \$882,854 |

Example assumes a 6% average annual return. This hypothetical example of mathematical compounding is used for illustrative purposes only and does not represent any specific investment. It assumes contributions are made at end of the calendar year. Rates of return vary over time, particularly for long-term investments. Fees and expenses are not considered and would reduce the performance shown if they were included. Actual results will vary.

SPECIAL 402(b) AND 457(b) PLAN RULES

403(b) and 457(b) plans can provide their own special catch-up opportunities. The 403(b) special rule, available to participants with at least 15 years of service, may permit an additional \$3,000 annual deferral for up to five years (certain additional limits apply). A participant can use this special rule and the age 50 catch-up rule in the same year. Therefore, a participant eligible for both could contribute up to \$27,000 to his or her 403(b) plan account (the \$18,000 regular deferral limit, plus the \$3,000 special catch-up, plus the \$6,000 age 50 catch-up). The 457(b) plan special rule allows participants who have not deferred the maximum amount in prior years to contribute up to twice the normal deferral limit (that is, up to \$36,000 in 2016 and 2017) in the three years prior to reaching the plan's normal retirement age. 457(b) participants who elect to use this special catch-up rule cannot also use the age 50 catch-up rule in the same year.

| | Number of winning years, 1987-2016 | |
|----------------|------------------------------------|--|
| Cash | 3 | |
| Bonds | 5 | |
| Stocks | 10 | |
| Foreign stocks | 12 | |

Performance is from December 31, 1986, to December 31, 2016. Cash is represented by Citigroup 3-month Treasury Bill Index. Bonds are represented by the Citigroup Corporate Bond Index, an unmanaged index. Stocks are represented by the S&P 500 Composite Price Index, an unmanaged index. Foreign stocks are represented by the MSCI EAFE Price Index, an unmanaged index. Investors cannot invest directly in any index. However, these indexes are accurate reflections of the performance of the individual asset classes shown. Returns reflect past performance and should not be considered indicative of future results. The returns do not reflect taxes, fees, brokerage commissions, or other expenses typically associated with investing.

The principal value of cash alternatives may fluctuate with market conditions. Cash alternatives are subject to liquidity and credit risks. It is possible to lose money with this type of investment.

The return and principal value of stocks may fluctuate with market conditions. Shares, when sold, may be worth more or less than their original cost.

U.S. Treasury securities are guaranteed by the federal government as to the timely payment of principal and interest, whereas corporate bonds are not. The principal value of bonds may fluctuate with market conditions. Bonds are subject to inflation, interest rate, and credit risks. Bonds redeemed prior to maturity may be worth more or less than their original cost.

The risks associated with investing on a worldwide basis include differences in financial reporting, currency exchange risk, as well as economic and political risk unique to the specific country.

Investments offering the potential for higher rates of return also involve higher risk.

WHY DIVERSIFICATION MATTERS

When investing, particularly for long-term goals, there is one concept you will likely hear about over and over again — diversification. Why is diversification so important? The simple reason is that it helps ensure that your risk of loss is spread among a number of different investments. The theory is that if some of the investments in your portfolio decline in value, others may rise or hold steady, helping to offset the losses.

DIVERSIFYING WITHIN ASSET CLASSES

For example, say you wanted to invest in stocks. Rather than investing in just domestic stocks, you could diversify your portfolio by investing in foreign stocks as well. Or you could choose to include the stocks of different size companies (small-cap, mid-cap, and/or large-cap stocks).

If your primary objective is to invest in bonds for income, you could choose both government and corporate bonds to potentially take advantage of their different risk/return profiles. You might also choose bonds of different maturities, because long-term bonds tend to react more dramatically to changes in interest rates than short-term bonds. As interest rates rise, bond prices typically fall.

INVESTING IN MUTUAL FUNDS

Because mutual funds invest in a mix of securities chosen by a fund manager to pursue the fund's stated objective, they can offer a certain level of "built-in" diversification. For this reason, mutual funds may be an appropriate choice for novice investors or those wishing to take more of a hands-off approach to their portfolios. Including a variety of mutual funds with different objectives and securities in your portfolio will help diversify your holdings that much more.

Mutual funds are sold by prospectus. Please consider the investment objectives, risks, charges, and expenses carefully before investing. The prospectus, which contains this and other information about the investment company, can be obtained from your financial professional. Be sure to read the prospectus carefully before deciding whether to invest.

DIVERSIFYING AMOUNG ASSET CLASSES

You might also consider including a mix of different types of asset classes — stocks, bonds, and cash — in your portfolio. Asset allocation is a strategic approach to diversifying your portfolio. After carefully considering your investment goals, time horizon, and risk tolerance, you would then invest different percentages of your portfolio in targeted asset classes to pursue your goal.

WINNING ASSET CLASSES OVER TIME

The table to the left, shows how many times during the past 30 years each asset class has come out on top in terms of performance, helps illustrate why diversifying among asset classes can be important.

6 Medicar

Many people decide to begin receiving early Social Security retirement benefits. In fact, according to the Social Security Administration, about 72% of retired workers receive benefits prior to their full retirement age.1 But waiting longer could significantly increase your monthly retirement income, so weigh your options carefully before making a decision.

TIMING COUNTS

Your monthly Social Security retirement benefit is based on your lifetime earnings. Your base benefit--the amount you'll receive at full retirement age--is calculated using a formula that takes into account your 35 highest earnings years. If you file for retirement benefits before reaching full retirement age (66 to 67, depending on your birth year), your benefit will be permanently reduced. For example, at age 62, each benefit check will be 25% to 30% less than it would have been had you waited and claimed your benefit at full retirement age (see table). Alternatively, if you postpone filing for benefits past your full retirement age, you'll earn delayed retirement credits for each month you wait, up until age 70. Delayed retirement credits will increase the amount you receive by about 8% per year if you were born in 1943 or later. The chart at the right shows how a monthly benefit of \$1,800 at full retirement age (66) would be affected if claimed as early as age 62 or as late as age 70. This is a hypothetical example used for illustrative purposes only; your benefits and results will vary.

EARLY OR LATE?

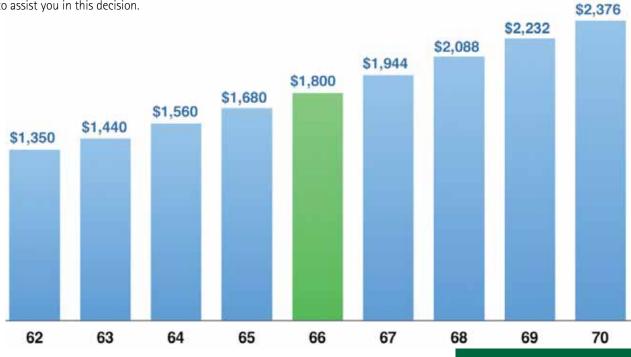

Should you begin receiving Social Security benefits early, or wait until full retirement age or even longer? If you absolutely need the money right away, your decision is clear-cut; otherwise, there's no "right" answer. But take time to make an informed, well-reasoned decision. Consider factors such as how much retirement income you'll need, your life expectancy, how your spouse or survivors might be affected, whether you plan to work after you start receiving benefits, and how your income taxes might be affected.

A vast majority of Americans take their Social Security early without fully understanding the large impact of the lifetime benefits available to participants. We can help you understand your options and develop a strategy that optimizes your Social Security benefits. Please contact us if you would like to further discuss your individual situation and we would be happy to assist you in this decision.

| Birth Year | Full Retirement Age | Percentage reduction at age 62 |
|------------------|---------------------------|--------------------------------|
| 1943-1954 | 66 | 25% |
| 1955 | 66 and 2 months | 25.83% |
| 1956 | 66 and 4 months | 26.67% |
| 1957 | 66 and 6 months | 27.50% |
| 1958 | 66 and 8 months | 28.33% |
| 1959 | 66 and 10 months | 29.17% |
| 1960 or later | 67 | 30% |

WHAT HAPPENS TO MY PROPERTY IF I DIE WITHOUT A WILL?

If you die without a will, your property will generally pass according to state law. When this happens, the state essentially makes a will for you. State laws specify how your property will pass, typically in certain proportions to various persons related to you. The specifics, however, vary from state to state.

Most state laws favor spouses and children first. For example, a typical state law might specify that your property pass one-half or one-third to your surviving spouse, with the remainder passing equally to all your children. If you don't have children, your spouse might inherit all of your property; in other states, your spouse might have to share the property with your brothers and sisters or parents.

But not all property is transferred by will or intestate succession. Regardless of whether you have a will, some property passes automatically to a joint owner or to a designated beneficiary. For example, you can transfer property such as IRAs, retirement plan benefits, and life insurance by naming a beneficiary. Property that you own jointly with right of survivorship will pass automatically to the surviving owners at your death. Property held in trust will pass to your beneficiaries according to the terms you set out in the trust.

Only property that is not transferred by beneficiary designation, joint ownership, will, or trust passes according to intestate succession. You should generally use beneficiary designations, joint ownership, wills, and trusts to control the disposition of your property so that you, rather than the state, determine who receives the benefit of your property.

Even if it seems that all your property will be transferred by beneficiary designation, joint ownership, or trust, you should still generally have a will. You can designate in the will who will receive any property that slips through the cracks.

And, of course, you can do other things in a will as well, such as name the executor of your estate to carry out your wishes as specified in the will, or name a guardian for your minor children.
